                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    840
          This represents a tumour antigen protein (SART-3) which is recognized by cytotoxic T-cells binding to HLA antigen. SART-3 can be expressed by standard recombinant methodology. SART-3 and its peptide derivatives can be used in the prevention, treatment and diagnosis of tumours in vitro or in vivo.
                                                                                                                                                                                                                                                                                                                                                                                                                          099

                                                                                                                                                                                               Human SART3-IC-HER-2 membrane distal intracellular domain fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 nucleic acid molecules encoding such proteins. The IFPs comprise a polygeptide antique component and an immunostimulatory component derived from the intracellular domain of HER-2 protein which is effective to elicit a protective dendritic cell (DC)-induced T-cell mediated cellular immune response to the antigen. IFP or superactivated dendritic cells are used to treat cancer e.g. breast carcinoma, ovarian and colon cancer associated with a particularly antigen. The present sequence is a fusion protein which comprises human squamous cell carcinoma antigen, SART3-IC and mature human HER-2 membrane distal intracellular domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          An immunostimulatory fusion protein comprising the intracellular domai
of HER-2 and an antigen elicits an immune response to the antigen and
is useful for the treatment of associated cancer associated -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 MATAAETSASEPEAESKAGPKADGEEDEVKAARTRRKVLSRAVAAATYKTMGPAWDQQEE

The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antinifective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal; pulmonary, cardiovascular, renal, and proliferative disorders, wounds, and infectious diseases. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias

The single exon nucleic acid probes may be used from human fettal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences:
                                                                                                                                                                                                                                                                                                                                             1 MATAAETSASEPEAESKAGPKADGEEDEVKAARTRRKVLSRAVAAATYKTMGPAWDQQEE
than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a peptide encoded by a single exon nucleic acid
                                                                 probe of the invention.

They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention.

The present invention relates to human single exon nucleic acid probes (SENP: see AAIIO08-AAIIS459). The present sequence is a peptide encoded by one such probe. The SEMPS are derived from human HeLa cells. The SEMPs can be used to produce a single exon microarray, which can be used for massuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Peptide #2820 encoded by probe for measuring placental gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 MATAAETSASEPEAESKAGPKADGEEDEVKAARTRRKVLSRAVAAATYKTMGPAWDQQEE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 MATAAETSASEPEAESKAGPKADGEEDEVKAARTRRKVLSRAVAAATYKTMGPAWDQQEE

The present invention relates to novel single exon nucleic acid probes (see AAI00010-AAI40067). The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic aetiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                breast disease and non-carcinoma tumours.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to single exon nucleic acid probes (SENP: see AA131315-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Probe; human; breast disease; breast cancer; development disorder; inflammatory disease; proliferative breast disease; non-carcinoma tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9

The control retained to a spatially-datesable set of single exon in clief acid probes for measuring single exon nuclet acid probes having one of for from human lung comprising single exon nuclet acid probes having one of for from human lung comprising single exon nuclet acid probes having one of complements or the 1287 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a collection of detectably labeled nucleic acids derived from human lung, comprising the novel set of muclet acid detectably labeled nucleic acids derived from human lung, comprising the array, identifying exons in a eukaryotic genome, comprising on mRNA, and (b) measuring the label detectably bound to each probe of the array, identifying exons in a eukaryotic genome, comprising complement identical to the predicted exon, the probe of the array, identifying exons in a eukaryotic genome, comprising comprising do adorithmical to the predicted exon, the probe is included in the above mentioned microarray; assigning exons to a single exon probe of the above mentioned microarray; assigning exons to a single exon probe of the above mentioned microarray; assigning exons to a single exon of above and (b) measuring the expression of each of the exons in the tissues and/or cell types using hybridisation to a single exon accordance and of the exons in the tissues and/or cell types indicates that expression analysis, and for identifying exons in a gene, particularly capped expression analysis, and for identifying exons in a gene, particularly diseases of the exons should be assigned to a single exon in a gene, particularly using human lung derived mRNA and for the study of lung diseases combinant and partern of a such as asthma, lung cancer, chronic obstructive pulmonary wispassion analysis, and for identifying exons in a gene, particularly assigned to a single exon probe of lung disease. (COPP), interstitial lung disease (ILD); familial idiopathic pulmona
                                                                                                                                                                                                                                                            Spatially-addressable \ set \ of \ single \ exon \ nucleic \ acid \ probes, \ used \ to \ measure \ gene \ expression \ in \ human \ lung \ samples \ -
                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a spatially-addressable set of single exon
                                                                                                                                                                                                                                                                                                                                   Claim 27; SEQ ID No 27732; 634pp; English
